Abstract

Renewable energy is a rapidly expanding field, based on the development of a range of new technologies and energy sources, the use of which could be part of the answer to climate change and energy security concerns. This book reviews the basic technological options and what is happening around the world, so as to convey the sense of excitement that abounds in this new area of technological development. But it also looks at the problems, including local environmental impacts and the need to deal with the variability of some renewable energy sources. This introduction sets the scene by briefly describing the key options and state of play, as well as some of the problems, and also provides a guide to energy units and issues.

Renewable energy: an overview of the issues and options

Renewable sources of energy, sometimes simply called 'renewables', are increasingly being used to meet our needs. This book attempts to review the state of play and explain how and why this expansion can and should continue, and indeed accelerate.

1.6.1. Tidal gravitational forces

Let us first start by describing tidal gravitational forces in Newtonian physics. The force of gravity exerted by an object of mass M on a particle of mass m a distance r away is $\vec{F}^t = -\hat{r}GMm/r^2$, where \hat{r} is the unit vector pointing from M to m and r is the distance between the center of M and m . The corresponding acceleration is $\vec{a} = -\hat{r}GM/r^2$. We assume now that the mass m is spherical of radius Δr . The distance of gravity exerted by the mass M on a particle at the centers of M and m is given by $\vec{F}^t = -\hat{r}GM/r^2$. The corresponding acceleration is

$$\vec{a} = -\hat{r}GM \frac{1}{(r + \Delta r)^2} = -\hat{r}GM \frac{1}{r^2} + \frac{\Delta r}{r^3} \quad (1.99)$$

1.1. An Interactive Scatter Plot Example

In order to provide a series of examples of increasing complexity, we first use two basic 3D structures: a green dice and a red dice. These models are designed with incremental complexity leading to the visualization of a datacube from the Very Large Array (VLA; see Section 3.1.2). Screenshots of both the green and red dice examples (as drawn inside the `scikit-plot` interactive plotting window) are presented in Figure 2.

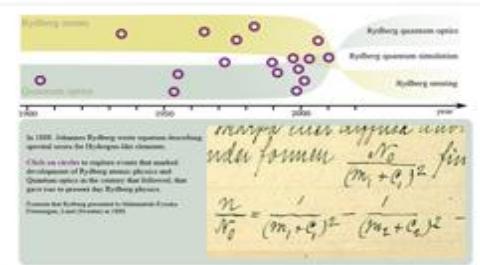

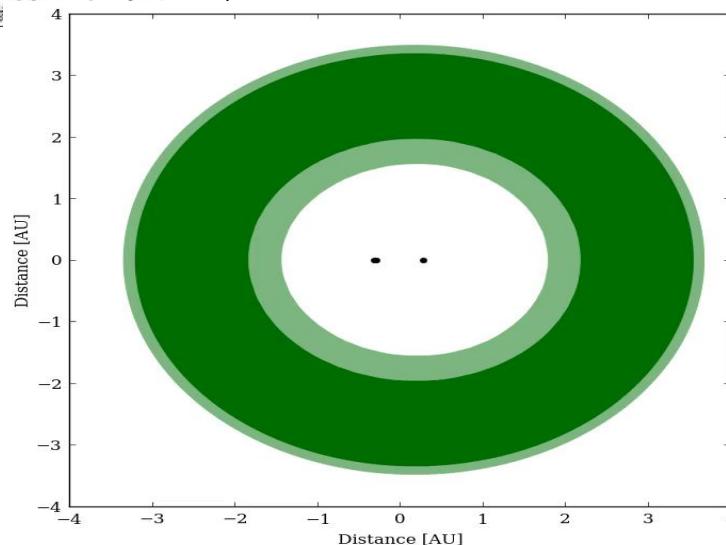

Figure 2. Timeline of some of the early developments. Points mark selected conceptual advances in quantum optics and Rydberg atomic physics. Together with new experimental capabilities provided by reliable coherent driving with wide frequency tuning range, they led to the accumulation of ideas and experimental possibilities for coherent control of atom-light interactions, both in the microwave and visible spectra, paving the way for modern Rydberg physics research. Meet the author Emily Levesque

Astrophysics of Red Supergiants is the first book of its kind devoted to our current knowledge of red supergiant stars, a key evolutionary phase that is critical to our larger understanding of massive stars. It is also the first to publish in the exciting new partnership with the American Astronomical Society and IOP ebooks. Please join us for this 45 minute webinar with Dr. Emily Levesque as she gives an overview of her book and answers your questions in a live Q&A. This webinar is recommended viewing for a range of experience levels, from graduate students up to senior researchers..

Publishing Support Page

点击首页的 Publishing Support 按钮进入出版支持

您也可以利用关键词搜索，找到相关的介绍

这里无论您是作者、审稿人还是会议主办方，我们为您提供丰富的信息，为您的出版流程保驾护航。

这里您可以查看一些常用链接

以及包括作者指南、审稿流程指南和版权信息在内的多种指南

The screenshot shows the IOP Publishing Support page. At the top, there's a navigation bar with 'IOPscience', 'Journals', 'Books', 'Publishing Support' (which is highlighted), a search bar, and 'Article lookup'. Below the navigation is a blue header bar with 'Publishing Support' and a search bar for 'Publishing Support'. The main content area is divided into several sections: 'Authors +', 'Journals', 'Conference Organisers +', 'Useful links', and 'Step guides'. Each section contains various links related to publishing support. A large central box contains the text: '这里无论您是作者、审稿人还是会议主办方，我们为您提供丰富的信息，为您的出版流程保驾护航。' (Here you can find information for authors, reviewers, and conference organizers to help your publishing process). Another box at the bottom right says: '以及包括作者指南、审稿流程指南和版权信息在内的多种指南' (including various guidelines such as author guidelines, review guidelines, and copyright information).
